

Universal Filename Policy

Team Naming Convention Handbook | v1.0 | Effective 2026-06-16

1. Purpose and scope

- This policy establishes one universal filename standard for documents, records, reports, templates, and shared artifacts so files remain readable, sortable, system-safe, automation-friendly, and consistent across teams, devices, repositories, and time.
- This handbook applies to shared folders, cloud storage, project repositories, email attachments, records systems, templates, exports, analysis outputs, and automation pipelines.

2. Canonical standard

- Use this default pattern for all files: **subject_document_type[_descriptor][_v#][_yyyy-mm-dd]**
- Validation regex: `^[a-z0-9]+(?:_[a-z0-9]+)*(?:_v[0-9]+(?:_[0-9]+)?)?(?:_[0-9]{4}-[0-9]{2}-[0-9]{2})?$`

3. Mandatory rules

- **Character set:** Use lowercase letters, numbers, and underscores. Hyphens are allowed only inside the final ISO date token.
- **Token order:** `subject_document_type[_descriptor][_v#][_yyyy-mm-dd]`
- **Document type:** Use a standard type term such as policy, procedure, guide, report, audit, requirements, proposal, plan, minutes, checklist, template, register, log, analysis.
- **Versions:** Use v1, v2, v3, etc. Minor versions may use v1_1, v1_2.
- **Dates:** If included, place the date last in yyyy-mm-dd format.
- **Length:** Keep filenames concise and meaningful. Avoid unnecessary filler words and duplication.
- **Stability:** Never rely on final, latest, or ad hoc phrases to indicate the current copy; use versioning instead.
- **Safety:** Avoid characters that break links, scripts, URLs, sync tools, or cross-platform storage.

4. Normalization workflow

- Convert the full filename body to lowercase.
- Replace spaces and separators with underscores.
- Remove prohibited punctuation and duplicate separators.
- Standardize wording to concise subject + document type + optional descriptor.
- Append version if the file is controlled or revised.
- Append terminal date only when operationally useful.
- Validate against the policy regex before saving or publishing.

5. Approved document-type vocabulary

- brief, proposal, requirements, specification, policy, procedure, guide, report, analysis, audit, plan, roadmap, minutes, summary, contract, invoice, presentation, template, checklist, register, log

6. Examples

- Approved examples:
- `unified_hub_requirements_hybrid`

- unified_hub_requirements_hybrid_v1
- unified_hub_requirements_hybrid_v1_2026-06-16
- ai_session_operating_rules_v1
- system_directive_architecture_audit_v1_2026-06-16
- client_proposal_v3_2026-06-16
- security_audit_v2
- meeting_minutes_v1_2026-06-16
- Prohibited examples:
- Unified Hub Business Requirements Document (BRD) / Functional Requirements Document (FRD) Hybrid
- AI session mandatory operating rules FINAL
- SYSTEM DIRECTIVE: SYSTEMATIC ARCHITECTURE AND STRUCTURAL AUDIT
- document_new_latest_final2
- project plan draft!!..docx

7. Examples from this session

- Unified_Hub_Business Requirements Document (BRD) / Functional Requirements Document (FRD) Hybrid -> unified_hub_requirements_hybrid
- AI session mandatory operating rules -> ai_session_mandatory_operating_rules
- SYSTEM DIRECTIVE: SYSTEMATIC ARCHITECTURE AND STRUCTURAL AUDIT -> system_directive_systematic_architecture_structural_audit

8. Implementation guidance

- Use version tags for controlled documents.
- Use dates when traceability or periodic reporting matters.
- Keep filenames stable after publication unless a governance rule requires renaming.
- Apply the same convention to related exported assets where possible.

9. Compliance and exceptions

- This standard is mandatory by default.
- Exceptions must be documented with a business reason, owner, and approved alternative.
