

Universal Filename Policy

One-Page Policy Memo | v1.0 | Effective 2026-06-16

Purpose

This policy establishes one universal filename standard for documents, records, reports, templates, and shared artifacts so files remain readable, sortable, system-safe, automation-friendly, and consistent across teams, devices, repositories, and time.

Policy Decision

Adopt one universal filename standard across all documents and systems:
subject_document_type[_descriptor][_v#][_yyyy-mm-dd].

Mandatory Rules

Lowercase only; underscores between words; letters and numbers only, with hyphens allowed only inside the final ISO date token; subject first; standard document type; optional descriptor; version and date at the end when needed; no spaces or prohibited punctuation; no vague labels such as final or latest.

Benefits

Improves findability, sorting, cross-platform safety, interoperability, scriptability, records control, and long-term consistency.

Examples

Approved: unified_hub_requirements_hybrid_v1_2026-06-16; ai_session_operating_rules_v1; security_audit_v2. Prohibited: document_new_latest_final2; SYSTEM DIRECTIVE: SYSTEMATIC ARCHITECTURE AND STRUCTURAL AUDIT.

Enforcement

Validate filenames against the approved regex before publishing:

```
^[a-z0-9]+(?:_[a-z0-9]+)*(?:_v[0-9]+(?:_[0-9]+)?)?(?:_[0-9]{4}-[0-9]{2}-[0-9]{2})??$
```
